

1946: a new idea in

LA.SC.O.D. acronym of

LABORATORI

SCIENTIFICI

ODONTOIATRIA.

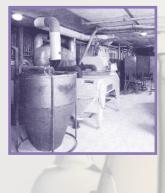

Here are the pictures
of some premises of
the first location in Via

Sirtori in Florence.

the reborn Florence.

Italy 1946: in Florence a new "Renaissance" is being experienced. It is here that experience, commitment, passion and even a little luck allow a university professor to create a small research laboratory that what, over time, would have been turned into a dynamic international chemical company. The zinc-oxyphosphate cement Kleio and the temporary filling cement Litark were the first two products introduced to the market. After a successful market response, Akripon (a thermoplastic impression compound) and Kromopan (the first ever chromatic alginate) were also introduced to the dental community.

1961: a revolution in

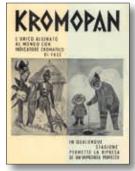

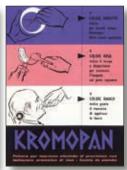

The chromatic indicator (Lascod patent) allows an immediate visual control over the different preparation phases avoiding useless and costly waste of time. **Kromopan immediately became a milestone of innovation for the dental world** because of its accuracy which allow to obtain high quality impressions with extreme ease and in any condition of temperature or water hardness. Today it is not only the most imitated invention but it also represents the philosophy of our Company and the history of impression material. Our objective is that of developing unique products with high technological content but extremely easy to use. On the basis of the consolidated experience with the chromatic indicator technology applied to our alginates we patented type 3 and 4 dental stones Kromotypo 3 and Kromotypo 4. The first ever chromatic plasters in the world, were followed suit by the Singletypo range: a series of plaster stones specifically developed to satisfy every modern dental laboratory's requirements.

1994: ZEFFIRO innovation.

Lascod commitment in the research area has always aimed to solve daily problems of the dentists. It's belief that the transmission of viruses and pathologies from one patient to another mainly occur by the using of the dental instruments or by the same operators in case of mild lesions. It was for the express purpose of facilitating the basic sanitizing steps of the instruments that in 1994 Lascod patented a new and extremely functional smooth handle. This innovative handle is obtained by means of advanced technical solutions that offer excellent, unequalled grip and control. A new industrially - produced technique has also been introduced for coupling the handle and the tip: the "chonometric insertion". Besides making the junction site impenetrable, this solution also eliminates the need to add other materials, chemical adhesives or welding generally used by other manufacturers; which are responsible for triggering and facilitating oxidation and corrosion.

University studies have indicated these areas as the most hazardous because of their ability to retain organic material even after thorough cleansing.

The fundamental principle of "absolute hygiene" already successfully used for the ZEFFIRO instrument line has allowed the creation of EXPLOIT impression trays obtained from a single sheet of cold-pressed stainless steel (LASCOD patent).

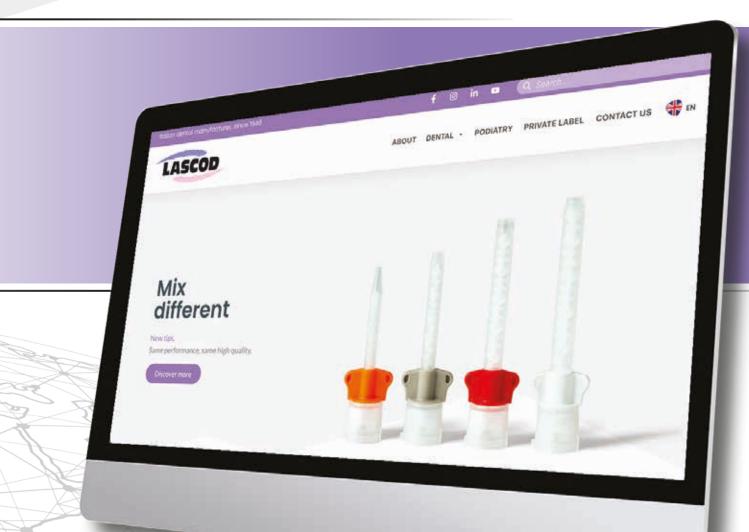

2009: constant renewal.

Changes always represent positive opportunities. They stimulate us and this is the reason why, **in 2009, we have chosen to consolidate worldwide our brand and Lascod presents a new image, beginning form the logotype**, with its distinctive violet and pink "brushes", the Kromopan's colors. It's all about a real revolution, which begins with a more somber graphic design: packaging, website, stands,... and continues with our commitment to offer positive answers to our customers with an everyday increasing reactiveness. Highly skilled personnel, an extensive sales network reaching all over the world, product quality recognition. All that, together with the most modern manufacturing, packing and logistics system have made of LASCOD products a reference point in the dental field. Innovation is for everyone at LASCOD a synonymous for attention to international markets development with a new management organization ready to satisfy diverse requests from different parts of the world.

a full range of viscosities in Fast and Normal setting

The wide selection of **Zeffiro kits** completes the Lascod product range: over 60 kits designed to meet every need in **diagnosis**, **surgery**, **orthodontics**, **laboratory** and our **Exploit** impression trays, packed in practical and economical 6-piece kits of different sizes. The Exploit trays, consisting of a single cold-pressed stainless steel plate (LASCOD patent), perforated and non-perforated, are compatible with all impression materials. The complete Zeffiro catalog is also available online by visiting our website **www.lascod.com**.

Lascod had developed also dental instruments to be used wherever there is the necessity of an urgent treatment as well as remote areas and in cases of home care in dentistry necessary to disabled or not transportable people.

LASCOD O.U.T. (ZKS001) basic kit responds efficiently to the need of portability with just three forceps for any extraction.

private label...

We are able to offer our customers different materials, services and solutions thanks to the development of "ad hoc" products based on specific requests. All this respecting the highest levels of service and quality and in fulfillment of a necessary confidential relationship required by the Private Label agreement. Thanks to our internal research and development laboratory, we are able to offer our Private Label customers specific products designed for their needs. Whether the choice is made through existing products or if we are asked to develop new ones, we always manage to offer "turnkey" projects that allow to minimize sale times while at the same time increasing the business margin of our customers.

No business is too big or too small!

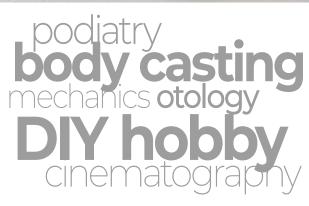

Our knowhow and success in the dentistry also allowed us to explore other fields of application.

For more info visit www.moldingmaterials.com

Thanks to Collaborators and Customers who, over the years, have made this happen.
