

Mimer SoftRadio

Connecting radios all over the world

Remote control your two way radio with VoIP audio

Virtual Control Heads for different radio types

Mimer SoftRadio is a system to remote control two way radios over LAN, WAN or the Internet. The operator uses a standard Windows PC and standard audio accessories.

Each operator can handle many radios and each radio can be remote controlled by many operators.

Through the use of Virtual Control Heads, the remote control of many radio types includes not only audio and PTT functions, but also channel change, text messaging and more.

The system allows for mixing of radio types at the same operator, so that analogue radios (marine and airband) and digital radios (DMR and Tetra) can be controlled. Also phones and intercoms can be operated from the same PC.

Optionally all audio can be recorded and calls can be cross patched between radio systems.

Read more about the users of SoftRadio on the web pages. www.lse.se/users

Mimer SoftRadio with three radios, voice log and SIP phone connected

Operator at a process industry

LS Elektronik AB

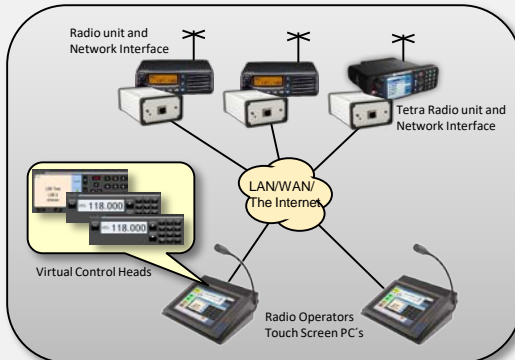

Markets

- Airports
- Coast Guard
- Public Safety
- Harbours
