

EndoPilot²

The complete solution for endodontics

The **EndoPilot²**-series combines all the functions required for state-of-the-art endodontic treatment.

✓ Modular design

Upgradeable to include functions such as **obturation**, **ultrasonic** und **irrigation**.

✓ High precision

Thanks to our **patented pulse measuring** method, unlike common 2-frequency measuring methods, measurement results are not distorted by up and down movements of the contra-angle handpiece.

✓ Intelligent safety features

Real-time position tracking inside the root canal. Speed reduction when approaching the apex. Automatic stop when reaching the preset working length.

✓ Battery and mains operation

Lithium-polymer-battery with up to 16h of battery life. Unrestricted use even while charging.

✓ Less file fractures

Our patented **ReFlex movement** detects the area where the instrument is stressed and adjusts the movement of the motor individually.

✓ Up to date at any time

Updates to functions, further developments or new files can be carried out independently and free of charge.

✓ File database without manufacturer restrictions

500+ installed and customizable **NiTi-file parameters**.

EndoPilot²

The complete solution for endodontics
