edelweiss CAD/CAM BLOCK

T-BLOCK/C-BLOCK/i-BLOCK

Dr. Marco Tutts
DDS, MScD

"The difference lies in the high similarity with nature."

ADVANTAGES

- Ultrafine sintered glass-ceramic microstructure combines high strength with permanent high gloss
- Shorter milling time
- Kinder to the milling burs
- No additional firing required, simply polish and cement
- Simple cementation procedure with proven perfect seal
- Cost saving, faster processing time reduces chairside time
- Biomechanical and biocompatible
- Esthetically superior, life-like appearance
- Restoration can be easily finetuned or repaired by the dentist

SPLIT MOUTH CLINICAL STUDY

After 4 weeks: edelweiss VENEERS maintain its original gloss and anatomy. Alternate veneers look dull and start to chip, with loss of its surface texture. Scratches appear on the surface of the alternate veneers as a result of tooth brush abrasion while the edelweiss VENEERS has its original shine.

PEDIATRIC CROWN PEDIATRIC VENEER

edelweiss
DENTISTRY

A Breakthrough in Pediatric Dentistry

The bio-ceramic edelweiss PEDIATRIC CROWN are characterized by a homogeneous glass-ceramic phase embedded in a carbon matrix, which makes them both highly antibacterial and plaque resistant.

They are biocompatible; they have the same abrasion as natural teeth, hence the edelweiss PEDIATRIC CROWN & VENEER does not damage the antagonist tooth.

The mesial and distal margins of the edelweiss PEDIATRIC CROWN & VENEER follow the natural gingival line of the milk teeth.

The edelweiss PEDIATRIC CROWN & VENEER perfectly imitates the natural milk tooth in both form and function. The pre-fabricated, bio-esthetical morphology allows for a quick and safe treatment.

You can achieve maximum esthetical results, which are minimally invasive, in one appointment. No matter what the dental situation, edelweiss has the right solution.

smiles for children.

PEDIATRIC CROWN & VENEER - SIZING GUIDE SIZES: S, M, L, XL (UPPER AND LOWER)

Dr. Jessica J. Sidharta
D.M.D. C.D.T.

edelweiss PEDIATRIC CROWN

"The treatment of carious milk teeth needs more attention, ability and concentration on the part of the dentist. Up until now, stainless steel crowns were for me the single and easiest way of getting a functional restoration with minimal costs.

But most kids and their parents were very disappointed with the dark looks and poor esthetics. Even after explaining to parents about the function in these cases they were not satisfied. Parents wanted both esthetics and function in a single crown. For me the edelweiss PEDIATRIC CROWNS is the perfect way to administer a perfectly naturally esthetic crown with minimal invasive procedures where I am in total control of the final outcome. The edelweiss PEDIATRIC CROWN has all the qualities on an ideal pediatric crown that I need."

"The difference lies in its easy and safe treatment."

YESTERDAY

TODAY

ADVANTAGES

- Pre-fabricated for all types of milk teeth in four universal sizes
- Morphology protects the pulpal-peaks of milk teeth
- Minimally-invasive
- Cuts like a natural tooth
- Biocompatible & bio-functional
- Antibacterial and plaque resistant
- Natural abrasion-behavior
- Repairable
- Cost-effective

INDICATIONS

- Anterior and posterior restorations
- Discoloration of primary teeth
- Morphological deformations
- Congenitally malformed primary teeth
- Developmental defects
- Poor enamel quality
- Increased carious activity
- Restoration of teeth after pulpectomy or pulpotomy procedures
- Fractured primary teeth following trauma
- Severe bruxism
- Erosion

VENEER OCCLUSIONVD COMPOSITE

UNIQUE BIO-CERAMIC ENAMEL SHELLS FOR ANTERIOR AND POSTERIOR RESTORATIONS

Thanks to the unique laser manufacturing process, the translucent enamel shells (VENEER & OCCLUSIONVD) stand out for their homogeneous single glass-ceramic phase embedded in a carbon matrix, through a process of sintering and vitrification of the glass particles.

The VENEERS and OCCLUSIONVDs represent the anatomic foundations for single or complete reconstructions and for increasing the vertical dimension in the posterior region. Hence, a functioning anterior cuspid guidance can also be obtained using edelweiss VENEERS & OVDs.

The difference lies in it's similarity with nature!

MINIMAL INVASIVE & COST-EFFECTIVE

	COMPOSITE	VENEER & OCCLUSIONVD
Flexural Strength	150 MPa	200 MPa
Compressive Strength	480 MPa	550 MPa
Flexural Modulus	12.5 (dentin) - 16 GPa (enamel)	20 GPa
Surface Hardness	80 HV	100 HV
Polymerization Shrinkage	2.50 %	—

ADVANTAGES

- One appointment
- Minimally invasive
- Natural look
- Long-lasting
- Biomechanical
- Biocompatible
- Antibacterial
- Economical

INDICATIONS

- Anterior and posterior restorations
- Tooth discolorations
- Anatomical deformities
- Diastema
- Erosion & Attrition
- Customized Veneers, Crowns & Bridges
- Crown facings
- Increasing the vertical dimension (OVD)

ALWAYS THE RIGHT SIZE

The edelweiss VENEERS and OCCLUSIONVDs are provided in different sizes. Using the edelweiss Sizing Guides, it is possible to easily determine the appropriate size of enamel shells.

VENEER Sizes: XS, S, M, L OCCLUSIONVD Sizes: S, M, L

edelweiss VENEERs LONG

«I started using VENEERs LONG to restore my periodontal patients with long teeth due to gingival recession. However I soon realized that also many not-periodontal patients have teeth with increased length-to-width ratio (i.e. l/w ratio > 1,4:1) and are well suited for edelweiss VENEERs LONG. Now I like to always have VENEERs LONG in my edelweiss VENEERs stock because it makes the system more flexible and allows me to treat a wider range of esthetic patients. Regular edelweiss VENEERs are designed with ideal length-to-width ratio (i.e. 1,2:1) to fit the large majority of patients. However, sometimes patients have teeth that are not ideal in size and it is not unusual to see longer teeth with increased length-to-width ratio. This is a common clinical finding in periodontal patients where soft tissue recession produces root exposure and increased tooth length. edelweiss VENEERs LONG are designed to optimally fit periodontal patients and allow to cover the exposed roots and to restore natural tooth appearance with a single-appointment, minimally-invasive restoration.»

January 1, 2015

JOURNAL OF ESTHETIC & RESTORATIVE DEN...

The advances in periodontal therapy and the clinical success of adhesive dentistry have changed the way dentists treat periodontal patients. As more teeth are saved, the demand for functional and esthetic restoration of periodontally involved teeth grows. Once, these teeth were restored with full-coverage splinted restorations, whereas today adhesive techniques provide less invasive and less complicated treatment options. This paper presents a novel adhesive combination of fiber-reinforced composite and prefabricated composite veneers to restore function and esthetics in a periodontal patient with severe bone and attachment loss. After successful completion of the periodontal treatment, fiber-reinforced composite has been bonded to the buccal surface of the maxillary anterior teeth in order to control teeth mobility. At the same appointment, prefabricated composite veneers have been bonded to the lingual teeth in order to restore esthetics. The final result shows full integration of contemporary adhesive techniques for single-appointment, minimally invasive treatment of a periodontal patient.

CLINICAL SIGNIFICANCE

This paper describes the use of fiber-reinforced composite and prefabricated composite veneers for the treatment of severe periodontal patients with a minimally invasive, single-appointment technique.
(J Esthet Restor Dent 274-12, 2015)

INTRODUCTION

disease with major social and psychological implications

EDELWEISS VENEERs LONG

vs. EDELWEISS VENEERs

ADVANTAGES

- One appointment
- Minimally invasive
- Natural look
- Long-lasting
- Biomechanical
- Biocompatible
- Antibacterial
- Economical

VENEERs LONG increase the flexibility of the edelweiss system because now a larger variety of veneer sizes is available. Until now edelweiss VENEERs were available with regular length-to-width ratio 1,2:1. Now also VENEERs LONG with increased length-to-width ratio 1,4:1 are available and dentists can choose the veneer proportion that best fits their patients.

POST & CORE

INNOVATION

The edelweiss POST & CORE system is a laser sintered monobloc, designed to prevent the wedging effect. The posts have a conical shape for perfect post space adaptation. The translucency of the fibre free post, supported by the lens design, allows uninterrupted light transmission for complete polymerization.

The adhesive bonding also avoids the wedging effect. The preparation of the core has a similar feel to that of the natural tooth and makes handling easier. The opaque buildup in A1 also offers various anatomical forms. It is possible to carry out the treatment in just one session, which is both time and cost effective for patient and dentist alike.

Translucent Post
for periapical light
polymerisation

Light Source:
"VALO by Ultradent"

Optimised workflow
reduces chairtime
up to 40 percent

The edelweiss POST & CORE system is a simple and a quick solution for all your post-endodontic needs. The one-piece composite POST & CORE can be customized as per the needs of the tooth with a true monobloc effect.

It is an ideal choice for rebuilding and strengthening broken down teeth. Cementation using edelweiss flowable composite, dual cure composite material or adhesive resin cement.

Dr. Deepak Mehta
B.D.S, M.D.S, PhD
Bangalore, India

DIRECT SYSTEM

POST & CORE

edelweiss POST & CORE

"The bio-ceramic edelweiss POST & CORE are characterized by a homogeneous glass-ceramic phase embedded in a carbon matrix. The glass crystals are sintered and vitrified to a monobloc which leads to perfect mechanics within the material. The flexural strength is similar to that of natural tooth. Congruent precision dental drilling creates a perfectly prepared post space. Different sizes of drills enable therapy for all dental anatomies. There are three different types of the edelweiss POST & CORE: anteriors, premolars and molars."

"The difference lies in the force buffer of the monobloc"

ADVANTAGES

- Prefabricated POST & CORE
- Translucent post for periapical light polymerisation
- Innovative monobloc of post and core with A1 buildup for natural integration
- Monobloc avoids wedging effect
- Biocompatible
- Flexural modulus 20 GPa like Dentin (15 - 20 GPa)
- Radio-opaque
- Cuts like dentin
- Superior adhesion to the root canal
- One session, reduced treatment time
- Time and cost effective
