ABOUT US

DENFAC committed to providing one-stop digital oral implant surgery solutions

DENFAC company is a modern enterprise integrating research and development, production, sales, application and transformation of dental technology in the field of precision medical devices, and training

Our company collects clinical data, uploads it to the cloud for multi-service collaborative processing, and combines the specific oral conditions of patients to match design services, accessories, consumables, tools and other businesses

Providing a complete implant surgery plan. The plan covers the medical end, technician end and patient end, meeting the diverse needs by the growing number of patients,

DENFAC has developed into a digital, full-chain high-end oral implant overall solution provider

DENFAC has 10 invention patents, 51 utility model patents, 2 PCT EU patents, 1 PCT US patent, 3 group standards, and 12 enterprise standards.

Customized Abutment High-end

*Continuous innovation cross-field
industry-university-research coop-
eration*

Continuously breaking through the
boundary and escorting oral health

Abutment and Accessories for Dental Implant

TITANIUM MESH AND ACCESSORIES

TITANIUM MESH

Titanium mesh has good mechanical properties compared with traditional barrier membranes, which can not only provide supportive protection for bone regeneration, but also reduce the amount of donor bone required for autologous bone grafting, so titanium mesh has a wide range of indications

Implant Surgical Kit

Why choose DENFAC ?

- Optional single item, customizable, optional set
- Suitable for multi implant system
- Accuracy 0.0001 mm;
- Customizable for drill shape, size and coating
- Customizable single case exclusive disposable tool set
- ROLLOMATIC equipment from switzerland

Digital oral implant and full chain integrated platform FC-Implant and CMP

FC-Implant GUIDE DESIGN

Implant surgery planning and design system

It provides implant surgery program planning and design functions to realize the design and output of implant guide, personalized base, upper restoration, etc., and digital implant design for deep cultivation, exploring a more simple and convenient user experience, from case introduction to implant program planning and design, enabling users to have a higher degree of freedom

Where Fullcover's charm goes, where is fascinating.

CMP

Implant case management platform

Preoperative implant planning, implant surgery guide design, customized abutment design

Ensure the operation process is accurate and controllable, and reduce the doctor's operation risk

Global leading implant case management solution

Helping more dental clinics and doctors meet the needs of patients.

CMP's closed-loop ecology is always surprising.

FC-Implant

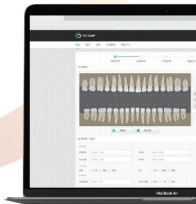

Implant surgery planning and design system

-  Data Import
-  Data Alignment
-  Virtual Teeth Extraction
-  Virtual Teeth Arrangement
-  Panoramic Curve
-  Anatomical Features
-  Planting Planning
-  Guide Design

CMP

Implant case management platform

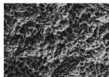

-  Free
-  Comprehensive Features
-  Process Traceability
-  Service Package
-  Data Synchronization
-  Communication
-  After-Sales Guarantee
-  Switch Clinic

IMPLANT SYSTEM

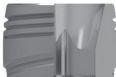

SLA surface treatment

Stable process to ensure good bone bonding
Results with excellent bone healing cycles

Neck microthread design

When in contact with cortical bone,
it effectively disperses gravity
Reasonable stimulation of cortical bone
was given to slow down bone resorption

Balance wall structure

With specialized surgical tools,
Ensures better bone compression

Dental Burs

- Carbide & ceramic burs for clinic (Crown cutter, Surgical bur, Finishing bur)
- Carbide burs and cutters for Lab
- Diamond bur

ROLLOMATIC

Switzerland 6 axis 8 linkage full
CNC machining center

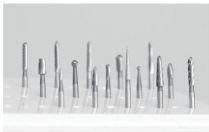

Precision: 0.0001mm

Equipment full computer+Robot
operation ensures that the needle
is straight and constant

Raw materials imported from Europe

DENTAL BURS

Excellent welding technology, no broken risk. The cutting efficiency is high, which shortens the operation time of the doctor and adds working life of the handpiece. The surface of the preparation produces less heat in high speed cutting. In the edge dressing of the shoulder table of the preparation, the tooth enamel breaks less, and the edge contour line is smooth.

Preparation bur set for crown, veneer and inlay

suitable for crown, veneer and inlay preparation
