

your
validation expert

ACCREDITED INDEPENDENT INNOVATIVE

Valitech
VALIDATION SERVICES

Valitech started as a pioneer more than 20 years ago and is now one of the market leaders in medical devices reprocessing validations in Germany. With our hygienic tests, microbiological examinations and the preparation of expert reports, we support medical clinics, hospitals, the food industry, the pharmaceutical industry and other sectors. **Valitech** is accredited as a testing and calibration laboratory by the German Accreditation Body (DAkkS). Our about 100 employees will be happy to support you.

- **Founded in 1998**
- **Headquarter in Falkensee (Suburb of Berlin) with two laboratory facilities**
- **95 employees, 40 validation engineers in field, 22 in the laboratory**
- **12.000 validations a year**
- **4.200 protein analysis per week**
- **2.700 seal seam integrity tests per year**
- **23.300 customers all over Germany**
- **2.200 data loggers sold to customers in different countries**

everything from
a single source

validation of reprocessing processes for medical devices

- Manufacturer-independent validation of the medical devices reprocessing in accordance with accredited procedures
- Specifically adapted procedure for medical practices or hospitals as well as medical device manufacturers
- Validation of the entire process chain of thermal and chemical processes

data loggers for process validation and monitoring

- Measurement of pressure, temperature and conductivity in thermal processes
- User-friendly software with templates for different applications
- Accredited calibrations

laboratory analyses, test specimen and expert opinions

- Validation of reprocessing instructions for medical device manufacturers
- Preparation of expert reports on reprocessing processes, devices and medical devices
- Protein analysis according to the modified oPA method in combination with fluorescence measurement
- Microbiological analyses
- Provision of test specimen for validation
- Studies on the biocompatibility of medical devices
