High-performance acrylic in-register surfaces for laminate manufacturers

EPYQ is a printed and coated acrylic surface which has matt-gloss effects in perfect register with the design, and is produced with proprietary technology developed in Belgium. EPYQ can be utilized in conventional laminate presses to achieve embossed-in-register effects without the additional complexity and costs traditionally associated with achieving in-register for melamine surfaces.

Laminate manufacturers are able to utilize their existing press plates/belts to steer the macro-textures of the laminate surface, while the micro-textures (gloss levels) are pre-determined by the EPYQ surface. EPYQ enables the combination of true-to-nature aesthetics with technical performance, boosting the innovation potential of its customers.
