

Harn - What defines us

At Harn, we design with precision, performance, and sustainability in mind. Since 1994, we have been manufacturing high-quality drawer systems that enhance the functionality and durability of modern furniture.

Our passion for engineering drives us to create smart, modular solutions that not only refine furniture design for users but also streamline the manufacturing and installation process for all in the supply chain.

Our product portfolio spans a range of drawer profiles including the versatile and modular Alunan T, the sleek and compact RITMA cube, both powered by our advanced RITMA T Platform. Designed to meet the highest industry standards, our drawer runner systems offer seamless motion, durability, and effortless installation - all while optimising storage efficiency.

Sustainability is at our core. Our factories now run on 5,400 m² of solar panels, generating 1.5 million kWh of renewable energy annually. We've also transitioned to cleaner natural gas, further reducing our carbon footprint. With sustainability at the heart of our operations, we are committed to building products that last while minimising environmental impact.

With over 30 years of experience, Harn remains dedicated to advancing furniture hardware through precision engineering and thoughtful innovation.
