

Saddle trees

We produce many types of saddle trees, either our own designs, or those of our clients as shown by sketches, drawings or patterns.

The trees are made of a flexible material that has a high resistance to fatigue and splits. The material is very suitable for nail and staple types of fixings. The saddle trees can be fully equipped with metal fittings, including a special spring steel gullet bar, for maximum comfort and injury avoidance of the horse due to rubbing, or high impact forces.
